Mariia Ganza

Backend-leaning Full-stack Engineer

Remote — based in Paraguay (UTC−3) | Works the team's defined hours in any time zone
email | portfolio | LinkedIn | GitHub

Software engineer with eight years of professional experience building React and TypeScript applications at EPAM Systems and Usetech: design systems, reusable components, and automated testing. Currently focused on Python backend development; designed, tested, and deployed a FastAPI/PostgreSQL/Redis application and its React client. Engineering background in C/C++ and microcontrollers.

SKILLS

BACKEND & DATA: Python, FastAPI, Pydantic, SQLAlchemy, Alembic, PostgreSQL, Redis, REST APIs, GraphQL, Node.js

FRONTEND: TypeScript, JavaScript, React, Next.js, Redux, Apollo Client, TanStack Query, Vite, HTML, CSS, Storybook

TESTING & DELIVERY: pytest, Jest, Vitest, Cypress, Playwright, Docker, GitHub Actions

PROJECTS

Language Power — Independent project | Case Study | API | Client | Demo

Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, React, TypeScript

- Built a FastAPI REST API and React/TypeScript client for a spaced-repetition vocabulary trainer, running as a private instance and a public demo with usage limits.
- Structured the async backend as routers, services, and repositories (SQLAlchemy 2.0, Alembic), with transactions owned by the service layer.
- Implemented Redis-backed server-side sessions with per-IP and per-account rate limits; put the Merriam-Webster API behind a provider interface with test mocks.
- Set up GitHub Actions CI (ruff, pytest against real PostgreSQL and Redis, migrations, pip-audit) and deployment to Google Cloud Run via Workload Identity Federation.
- Rebuilt the app from an earlier Node.js/GraphQL/MongoDB TypeScript monorepo, replacing shared packages with a documented REST contract.

Stars Travel — Independent portfolio project (not deployed) | GitHub

Next.js, TypeScript, Prisma, PostgreSQL, Redis, OpenAI API

- Built a fictional flight-booking app with Next.js Server Actions, custom authentication (bcrypt, JWT, CSRF tokens), and an OpenAI chatbot with Redis-enforced usage caps.

EXPERIENCE

EPAM Systems — *Senior Software Engineer*

Aug 2020 – Dec 2025 · Frontend Engineer; promoted to Senior Software Engineer in Nov 2021

- Built features for a smart-home service platform (2022–2025) where technicians manage clients' homes, and for its admin portal: charts, data tables, Auth0 authentication.
- Developed components for the design system shared across the platform's portals.
- Took part in two data-layer migrations, from Relay to Apollo Client and then from GraphQL to REST with React Query, and in moving the build from Webpack to Vite.
- Wrote and maintained Cypress tests for existing user flows and new features.
- Earlier (2020–2021): helped migrate a Vue.js frontend to React and TypeScript, and set up frontend tooling for a new data-platform project.
- Helped record EPAM's internal accessibility training course.

Usetech — *Senior Software Engineer*

Jun 2019 – Jun 2020

- Developed reusable UI components for the bank's company-wide design system, including a Storybook library used by design and marketing teams.
- Contributed to server-side rendering with Node.js for the bank's main website.
- Wrote Jest unit tests for shared components, helping raise team coverage to 80%.
- Worked on SEO improvements and led Google Analytics tagging for the team's pages, making sure each page was tagged and collected data correctly.

EPAM Systems — *Software Engineer*

Jul 2017 – Jun 2019 · Trainee, then Junior Software Engineer (Apr 2018) and Software Engineer (Sep 2018)

- Worked on e-commerce sites: legacy-code refactoring and conversion-focused UI.
- Optimized SVG and font delivery to improve application performance.
- Built JavaScript analytics scripts for marketers to study conversion behavior.

EDUCATION

Saint Petersburg State Electrotechnical University "LETI"

Bachelor of Instrumentation Technology · 2012 – 2017

Foundation in C/C++, microcontrollers, constrained memory, and hardware/software debugging.
