Mariia Ganza

Backend-leaning Fullstack Engineer | Python, TypeScript, React

Remote — LATAM | Available for scheduled US/EU time-zone overlap
email | portfolio | LinkedIn | GitHub

Software engineer with senior professional experience in React/TypeScript applications, enterprise design systems, and automated testing. Currently focused on Python backend development through an independently developed FastAPI/PostgreSQL application. Combines an engineering foundation with an interest in diagnosing defects across UI, API, and data boundaries.

SKILLS

BACKEND & DATA: Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, REST APIs, GraphQL, Node.js, Apollo Server

FRONTEND: TypeScript, JavaScript, React, Next.js, Apollo Client, Redux, HTML, CSS, Storybook

ENGINEERING PRACTICES: Docker, GitHub Actions, Cypress, Jest/unit testing

PROJECTS

Language Learning Platform — Independent project | Case Study | GitHub

Python, FastAPI, SQLAlchemy, PostgreSQL, Redis, React, TypeScript

- Implemented a FastAPI REST backend and Redis-backed session authentication for a separately deployed React client.
- Modeled learner-owned vocabulary, per-game scheduling state, and review history in PostgreSQL; implemented configurable spaced-repetition logic.
- Rebuilt an earlier Node.js/GraphQL implementation in Python, separating client and server builds and replacing shared TypeScript packages with a documented REST contract.

Stars Travel — Independent portfolio project | GitHub

Next.js, TypeScript, Prisma, PostgreSQL, Redis, OpenAI API

- Designed and implemented a fictional travel-agency application with trip discovery and an AI chatbot.

EXPERIENCE

EPAM Systems - *Senior Software Engineer*

Aug 2020 - Dec 2025

- Developed and maintained frontend components across multiple client projects.
- Wrote and maintained automated tests for application components.
- Updated project dependencies as part of ongoing application maintenance.

Usetech - *Senior Software Engineer*

Jun 2019 - Jul 2020

- Developed and maintained reusable UI components for a company-wide design system.
- Contributed to the Storybook component library used by design and marketing teams to prepare interfaces for campaigns and changing business requirements.
- Implemented accessibility improvements on team-maintained pages in close collaboration with the bank's dedicated accessibility team.
- Wrote and maintained automated tests for shared UI components.

EPAM Systems - *Frontend Developer*

Apr 2018 - May 2019

- Optimized SVG images, fonts, and overall application performance
- Created JavaScript analytics scripts for marketing optimization, analyzing conversion factors and user behavior

EDUCATION

Saint Petersburg State Electrotechnical University "LETI" - *Bachelor of Instrumentation Technology*

2012-2017

Engineering foundation: C/C++, microcontrollers, sensor/display interfaces, constrained memory, and hardware/software debugging.
